

User Flow Diagram

User Flow Description

The House Rent application follows a simple and user-friendly workflow that allows tenants to search for rental properties and submit booking requests efficiently.

Step 1: Registration and Login

Users begin by creating an account using their personal details such as name, email, and password. After successful registration, they can log in securely to access the platform.

Step 2: Property Search

Once logged in, users can browse available rental properties listed by property owners. The system provides advanced search and filtering options based on location, rent amount, property type, and amenities.

Step 3: Property Details View

Users can select a property to view complete details, including property description, rent amount, images, amenities, availability status, and owner information.

Step 4: Booking Request

If interested in a property, the user can submit a booking request or schedule a visit. The request is stored in the system and forwarded to the respective property owner.

Step 5: Owner Review Process

The property owner reviews the booking request and decides whether to approve or reject it based on property availability and other considerations.

Step 6: Booking Status Update

After the owner's decision, the booking status is updated accordingly. Users can track the status of their requests directly from their dashboard.

Step 7: Booking History

All booking activities, including approvals, rejections, and completed bookings, are stored in the Booking History module for future reference

Step 8: End of Process

The user can continue browsing properties, submit additional booking requests, or manage their account through the platform.
